

**Protecting you  
& your home  
using nature's  
resources**

**Our service program features  
EcoSMART®'s Patented Botanical  
Products**

As a Pest Management Professional, we are constantly striving to improve our service by utilizing the latest technology available. We proudly use products from EcoSMART Technologies which contain a patented blend of botanical oils that effectively targets a broad spectrum of pests... not people or pets.

Armored Pest Solutions has always been the leader in environmental awareness and safety for our customers. In keeping with this tradition, we are now offering a natural pest control service featuring products with botanical active ingredients.

These products protect property utilizing nature's resources, plant essential oils.

Armored Pest Solutions' newest service offering uses patented products made from blends of natural plant essential oils (*2 Phenethyl Propionate; Eugenol (clove oil), Thyme, Wintergreen, Rosemary, Vanilla*) and Natural Pyrethrum. They contain no man made synergists.

These products are all NOP (National Organic Program, an FDA program) compliant and work as well as traditional pest control methods. They offer you the security of knowing that your property is protected from harmful insects while providing peace of mind knowing there are no worries about possible harmful side effects from the pesticides.

Essential oil based products kill insects by blocking the nerve receptor sites for octopamine, a key nerve transmitter only used by invertebrates (insects) to regulate their central nervous system. Blocking the nerve signal causes a total breakdown of their central nervous system followed by rapid death. Since mammals, birds and fish have no receptors for octopamine and use other chemicals to regulate their central nervous systems (adrenaline, dopamine...); these products have no adverse effect on them.
